

With P-Mail, information and documents can be distributed easily, secure and cost-efficient

SafeCom™ P-Mail

In many organizations, e-mail has become an indispensable tool for distributing information to employees and colleagues. However, at times, information needs to be distributed to staff who do not have easy access to a PC. Today, distribution is done manually, by internal mail or by placing announcements on central bulletin boards.

Conventional distribution is both complicated and problematic. Often, staff with PCs receive information much faster than staff without, and the sender has no way of knowing if documents have actually been collected and read. Furthermore, confidentiality is compromised when information is distributed this way. Finally, manual distribution of documents is demanding in terms of human and financial resources.

The SafeCom™ P-Mail (Print Mail) function enables large private and public organizations to distribute information and documents to recipients situated locally and overseas, and receive immediate feedback on who has actually collected them. This is done efficiently without compromising document security or adding to distribution costs.

SafeCom™ makes it possible to send a P-Mail to individuals, groups or the entire organization. Just as e-mail is unaffected by postal codes and national boundaries, P-Mail can also be sent via the Internet and printed in both domestic and overseas branches. The sender can put a time limit on document availability, so that outdated information is not printed. The sender will receive notification, as an automatic reply e-mail lists the persons who have not retrieved the information during the period in which the document was available.

The only condition for receiving P-Mail is that addressees must have access to a network printer equipped with SafeCom™. The printers can be installed at central locations within the organization - e.g. in the canteen or close to entrances. Employees can then simply go to any SafeCom™ equipped printer, identify themselves with a personal card and PIN code, and print any documents that are waiting on the server addressed to them. Before a document is released from the printer, the user can decide to retain it in encrypted form for later use.

SafeCom™

SafeCom™ Check Printing

When it is of utmost importance that documents are only printed once, the SafeCom™ Check Printing function ensures that cheques or confidential papers cannot be printed more than one time, even if sent to a user group. The SafeCom™ Check Printing function allows encrypted document distribution, needed in many security printing environments. Here, a check is distributed to a group and only one of the group members can retrieve it. Document retrieval time and IDs are registered.

The SafeCom™ P-Mail function is already being used widely in several environments:

- Pay slips can be distributed confidentially to all domestic and overseas employees
- Personal work schedules can be released to employees, meaning that e.g., flight attendants can receive changes to their schedule when arriving at the gate.
- Students can print out their exam schedules and results anywhere on campus.
- In a shipping department, order retrieval times are registered, as well as the ID of the person retrieving and processing an order.

With SafeCom™ installed, private and public organizations are able to distribute information and documents more efficiently without compromising document security.
